

1. Login

1.1 Open the official Transcription Platform website in your browser:

https://sbs.aidicrowd.com/wf_Diarization_FY26

1.2 Enter the account and password provided by your PM.

1.3 Click "Sign In" to enter the platform's main interface.

💡 **Tip:** For the best experience, use **Chrome**, **Edge**, or **Firefox** on a computer.

This platform does not support mobile devices.

2. Accessing the Transcription Interface

To access the transcription interface and start working on a task, follow these steps:

2.1 Go to My Work > TC Task.

2.2 From the assigned tasks list, select the task you'd like to work on.

2.3 Click the Do Work button.

Welcome T1-AUDIO Change Password

Do Work

	Language	Batch	Name	Status	QC Comments
1	cs-cz	FY26	020b1ae4-c2c9-405e-860c-0cd09ca60eaf.wav	Allocated	
2	cs-cz	FY26	0255c467-7625-47ae-8bee-53dd826d0c11.wav	Allocated	

3

From the assigned tasks list, select the task you want to work on.

You will then be taken to the transcription interface, where you can listen the audio file, edit the transcript, and use playback controls

The screenshot shows a transcription interface with a top bar containing navigation and action buttons (Load, Save to Server, Validate, Submit task, Play, Zoom, Hide panel, Open Video). Below this is a timeline with six audio segments (#1 to #6) and their corresponding transcripts. A bottom bar includes playback controls like 'Cut @ cursor', 'Merge next', 'Undo', 'Volume', 'Nudge step', and 'Loop selected segment'. On the right, there are export options (Export JSON, Export TSV, Import JSON, Clear) and a 'Segments' table.

#	Start	End	Spk	Gender	Text	Actions
1	0.468	5.470			Dnešní povídání vzniklo na základě tohoto dotazu: "Krásný den náš milý,	
2	5.558	11.410			pane Jifi a Tamarino, moc ráda bych položila Tamarině otázku ohledně partnerského vztahu.	
3	11.490	15.310			Žiji mnoho let s manželem, kterého stále miluji, a myslím, že i on mě,	
4	15.390	20.230			ale pracuji již delší dobu na sebezvoji a navyšování svých vibrací	
5	20.310	22.610			a cítím, jak se měním.	
6	22.890	26.290			Čím dál tím více vyhledávám ticho a samotu...	
7	26.370	30.490			Manžel však zůstává stále na svých původních vibracích a ještě	
8	30.570	33.970			není připraven a ani nechce s tím něco dělat.	
9	34.050	39.130			Drivější společné koníčky, např. návštěvu rockových koncertů již nesdílíme,	
10	39.210	44.950			neboť mým úšim je tento hluk velmi nepříjemný. Manžel se snaží to chápat a přizpůsobit se	
11	45.030	50.890			(na koncerty již sám nejede), ale myslím, že ho to mrzí... Prosím, je soužití dvou lidí,	
12	50.970	57.130			kde je stále láska, ale stále větší rozdíl ve vibracích určeno vždy k zániku,	
13	57.210	60.790			nebo existuje způsob, jak takový vztah zachránit?	
14	60.870	67.330			Velmi nerada bych mu jakkoli ublížila, ale další svůj vývoj již nemohu a ani nechci zastavit...	

3. How to Work on an Assigned Task

Once you open a task, you'll see that the audio has been pre-processed by AI, including initial transcription and segmentation. However, these automatic results may not be perfectly accurate and require your refinement.

⚠ Important: Always follow the rules specified in the **[0206Y26 Display Annotation Task]** guideline while working on your tasks. This guide provides supplementary instructions only.

Your job is to improve the task by following the guidelines below:

3.1 Review and Adjust Segmentation

- Ensure each audio segment is **less than 30 seconds** long.
- If a word is cut off or the split doesn't occur at a natural pause, **readjust the timestamps** accordingly.

3.2 Edit the Transcription

- Correct any transcription errors made by the AI.
- If the AI-generated text is completely different from what you hear in the audio, **re-transcribe the segment from scratch** based on what you hear.
- Follow **capitalization rules** when transcribing.
 - **💡** If your language does not use capitalization (e.g., Chinese, Arabic, Hindi), please **notify your PM immediately**.
- Add proper **punctuation** (periods, commas, question marks, etc.).
- Apply **required tags** as specified in the **[0206Y26 Display Annotation Task]** guideline.
- All numbers should be converted to ITN form, following the ITN rules specified in the **[0206Y26 Display Annotation Task]** guideline.

💡 Tip: Always play each segment while reviewing the text to ensure accuracy and

natural flow. Your ear is the best quality check.

4. How to adjust the segmentation

4.1 Play Each Audio Clip

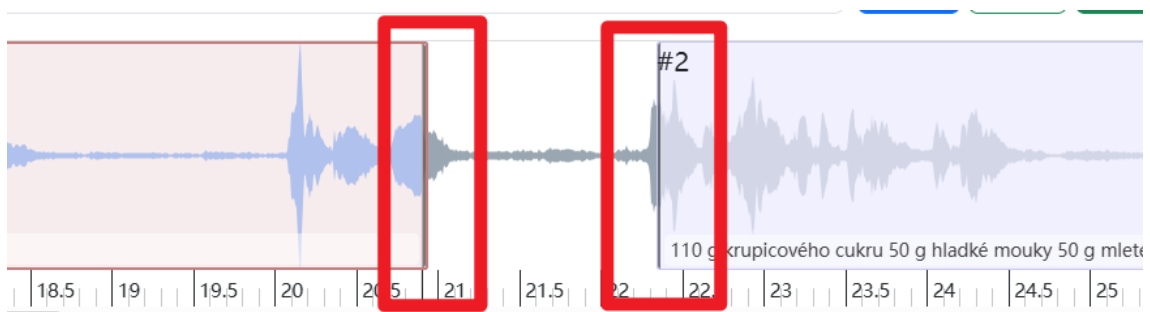

The screenshot shows an audio waveform at the top with a time axis from 0 to 8.5 seconds. Below the waveform is a table of segments. A red arrow points to the 'Play button' in the 'Actions' column of the first segment.

#	Start	End	Spk	Text	Actions
1	0.000	20.940	S1	Vítejte u dalšího sladkého receptu s názvem Mand...	 
2	22.340	38.020	S1	110 g krupicového cukru 50 g hladké mouky 50 g ...	 
3	39.080	54.940	S1	moučkový cukr 100 g fondánu 50 g stuzeného tuk...	 
4	55.760	77.780	S1	1 říjci citronové šťávy a čokoládovou polivu Bílky s ...	 

Play each audio clip one by one in sequence.

- If there are no issues with the audio, proceed to the next clip.
- If you encounter the following issue, adjust the duration:
 - The audio starts or ends at a point with large waveform fluctuations, potentially causing words to be cut off or the clip to end unnaturally.

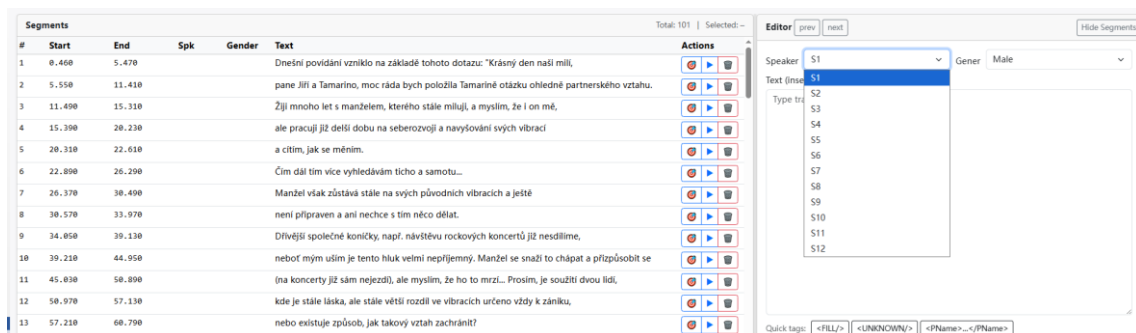

4.2 Adjust the Duration:

- Hover your mouse over the start or end of the audio clip.
- When the cursor turns into a double-headed arrow, click and drag left or right to adjust the clip length.
- Ensure the audio starts and ends clearly, without cutting any words, and **finishes at a natural pause**.
- Confirm each audio segment is less than **30 seconds** long.

5. Audio Transcription Standard Workflow

After confirming all audio clips are correctly segmented, proceed to transcription.

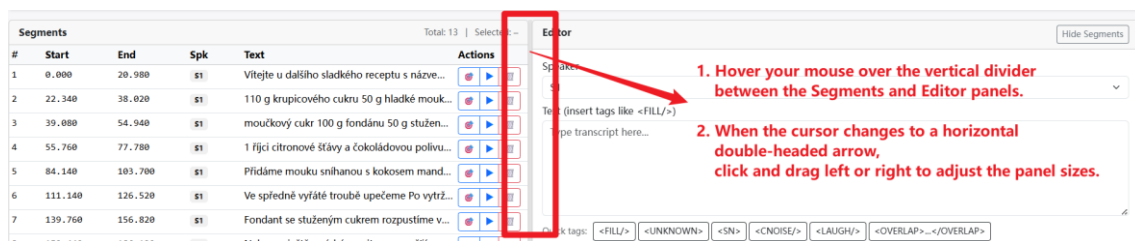

- Play each audio segment from the segments list and check if the AI-generated transcription is accurate.
- Adjust the Start/End time of each segment(cursor drag, cut, merge, fine-tuning etc.)
- Choose Speaker ID and Gender for this segment. If you are sure about the speaker's gender or which speaker is talking, please click **"open video"** to watch.
- Correct any errors in capitalization, ITN formatting, or content as needed.
- Add punctuation
- Add tags:
 - Use the Quick Tag hotkeys to add tags at the appropriate positions in the text.
- Re-listen to the current audio segment and verify that the transcription matches the audio exactly.
- Proceed to the next segment only after confirmation.
- Follow this workflow for all segments until transcription and verification are complete.

6. Resize the Panels:

You can resize the Segments and Editor panels by dragging their split border.

- Hover your mouse over the vertical divider between the Segments and Editor panels.
- When the cursor changes to a horizontal double-headed arrow, click and drag left or right to adjust the panel sizes.

7. Keyboard Shortcuts Reference

7.1 Cut @ cursor Merge next Undo [Ss] [Ss] Volume Nudge step: 0.100 s Start - Start + End - End + [x] Loop selected segment [x] Drag-to-create segment

Button	Function
Cut @ cursor	Split the audio at the current cursor position to create a new segment.
Merge next	Combine the currently selected segment with the next adjacent segment.
Undo	Revert the last edit action (e.g., cut, merge, delete).
5s / 5s	Jump the playback cursor 5 seconds backward/forward.
Volume	Adjust the audio playback volume.
Nudge step	Set the time increment (e.g., 0.100s) for fine-tuning segment timestamps.
Start - / Start +	Adjust the start time of the selected segment backward/forward by the nudge step.
End - / End +	Adjust the end time of the selected segment backward/forward by the nudge step.
Loop selected segment	Toggle continuous playback of the currently selected segment.
Drag-to-create segment	Toggle whether dragging on the waveform automatically creates a new segment.

7.2

Button	Function
Load	Load the audio from the provided URL into the waveform editor
Save	Save your current progress to the browser's local storage (auto-save backup)
Submit task	Finalize and submit the entire transcription/annotation task to the system.
Play	Play/pause the loaded audio file.
Speed	Adjust playback speed (Options: 0.5x, 1x, 1.5x, 2x).
Zoom +/-	Zoom in/out of the audio waveform for precise editing.
Hide panel	Collapse/expand the right-side Editor panel to maximize waveform view.
Open Video	Start the video from the provided URL into a new browser page.

7.3

Button	Function
Check	Validate all segments (ensures start < end and no overlapping timestamps).
Export JSON	Download the entire project as a JSON file for backup or later editing.
Export TSV	Download the transcription data as a tab-separated values file.
Import project JSON	Load a previously exported JSON project file to resume editing.
Clear	Reset the entire editor (delete all segments and text) to start a new task.

7.4

Button	Function
Save segment	Save the current speaker label and transcript text to the selected segment.
Play seg	Play only the currently selected audio segment for transcription review.
Hide Segments	Collapse/expand the left-side Segments table to maximize editor view.

7.5

Quick tags: <FILL/> <UNKNOWN>

Tag Type	Example	Action
Single tags	<FILL/>, <UNKNOWN/>	Position your cursor in the text box and click the quick tag to insert it directly.
Paired tags	<PName> </PName>	Select the text in the input box and click the <PNAME> tag to wrap it automatically.

7.6

Hotkeys: Space play/pause, C cut, Del delete segment (非文本输入时), Ctrl + Z undo, M merge next, A / D start -/+, J / L end -/+, I / O prev/next segment

Shortcut	Action
C	Cut at cursor
Del	Delete selected segment (when not typing in text fields)
Ctrl + Z	Undo last action
M	Merge next segment
A / D	Adjust segment start time (-/+)
J / L	Adjust segment end time (-/+)
↑ / ↓	Navigate to previous/next segment

8. Quick Tag Cheat Sheet

Tags	Definition
<FILL/>	For meaningless fillers, false starts, partial words, stumbles, and laughter.
<UNKNOWN/>	For unintelligible audio (due to accent, volume, speed, noise, truncation) or foreign language. Do not use for clear but ambiguous speech.
<PName> </PName>	For all personal names
